

Company Wise Interview Questions

Company Name: Paramatrix Technologies

Questions:

1. can we override the main method?
2. Method overload with example
3. How will you write a list of arrays of student type
4. What are the different ways to the parameter of method inside the method

Company Name: Zycus Infotech Pvt. Ltd

Questions:

1. How are exceptions handled in distributed systems?
2. What is system design?
3. How do you design a high-level architecture for an application? What are the steps?
4. What are the steps to implement transaction management in Spring Boot?

Company Name: C-EDGE

Questions:

1. What is @Controller and @ControllerAdvice
2. Componnet and bean annotations
3. Second Largest Number
4. What is Stream
5. What is ParrellStream and Stream
6. What is ConcurrentModificationException
7. What are the Sterotypes of annotations
8. How many types of view resolvers are there
9. How can You configure 2 database in one application Properties file
10. Why Default method is introduced if static method is introduced

COMPANY NAME: NUSUMMIT

Questions:

1. What are the features of java 8 ?
2. Difference between stream and parallel stream api
3. Explain spring security
4. Second highest salary in sql
5. Why we use stream
6. What is functional interface

Company Name: Inferyx Hinjewadi

Questions:

1. difference between shallow copy & deep copy
2. what is volatile keyword
3. difference between volatile & synchronized
4. what is future task
5. thread locker
6. runnable and callable
7. in your project where you use runnable and callable
8. memory leak reason and troubleshooting how do you handle this
9. hashmap internal structure
10. how do you handle high cpu alert
11. spark api
12. big data technologies
13. kafka
14. how data coming from kafka

Company: Applied Cloud Computing

Questions:

1. 1.creating a map having count of file extension [text,3],[pdf,5]..... given list of string file name, count the file extension t ion map using streams.
2. what is the advantage of Hibernate
3. 3.Write a program to remove the duplicate
4. what is N+1 problem
5. what is lazy loading
6. what microservice architecture used in your project
7. what is @Entity

Company : ParaMatrix

Questions:

1. project architecture (LOS)
2. what service are there in your project
3. OOPs in java
4. == and equals db
5. abstract vs interface not explain
6. Stream API
7. String vs String buffer vs String builder
8. What is Deadlock
9. explain Spring boot
10. Application .properties and YML
11. API gateway
12. Primary and unique key
13. Foreign key
14. JOIN with example
15. query for Deleting duplicate data from table
16. Challenges you faced in project
17. production issues question
18. how you work with your Team

Company : Teams Computers

Questions:

1. How do you manage the load on the API
2. Solve the palindrome using stream API
3. Solve the Anagram using the stream API
4. What is virtual Thread
5. What are the features of 17
6. What is Transactional
7. What are the types of Cache
8. What Annotations have you used in your project
9. What is spring profile
10. What is @configuration and @Bean

11. What architecture have you used in Microservice

Company Name: Inferyx Hinjewadi

Questions:

1. Write java program to take as input array and even number at even place and odd number at odd place with sorted order.

2. Not use In-build function.

3. Example1 :- 5,10, 9, 14, 7, 12

OR

Example2 :- 5, 10, 14, 9, 7, 12

Output :- 5 10 7 12 9 14

4. Write a java program to reverse an array without using an additional array. That means your program should reverse the given array in place. For example, if {12, 9, 21, 17, 33, 7} is the input array, then your program should return {7, 33, 17, 21, 9, 12} as output number. Don't use In-build function.

5. Write a Java program to count the number of duplicate words in a string and put into map<Key,Value> pair, loop the map<Key,Value> pair?

Input : java spring java language

Output : {"Java":2,"spring":1,"language":1}

Company Name : Applied Cloud Computing

Questions:

1. have you ever worked on cloud?

2. What will be output for below code?

3. try{

```
// some code throwing IOException
} catch(Exception exception){
    System.out.println(exception);
    throw exception;
} catch(IOException ioException){
```

```
System.out.println(ioException);  
throw ioException;  
}
```

4. What will be output for below code?

```
List list = new ArrayList<>();  
list.add(4);  
list.add(4);  
list.add(4);  
list.add(4);  
  
list.stream().map( i -> i * i);  
  
for(Integer num: list){  
System.out.println(num);  
}
```

5. Write a code to find the nth highest price product from the map

```
Map<String, String> productMap = new HashMap<>();  
productMap.put("Phone", "16000.0");  
productMap.put("Tablet", "6000.0");  
productMap.put("Laptop", "150000.0");  
productMap.put("Monitor", "3000.0");  
productMap.put("Camera", "8000.0");  
productMap.put("keyboard", "1800.0");
```

6. explain custom exceptions

Company Name : Team Computers

Questions:

1. JAVA 8 Features
2. JAVA 17 Features
3. Hashtable vs Hashmap
4. Map vs FlatMap
5. Executor Service
6. JPA Annotations
7. Spring Security Dependency
8. JPA Returntype
9. custom query can possible in JPA and How?

10. @UtilityClass
11. Controller and Restcontroller
12. Special Annotations you were used in your project

Company - Teams computers

Questions:

1. What is the functional interface
2. Can we have the main method in interface
3. How many methods are there in functional interface
4. Return the largest string from a streams
5. Remove the null strings from a list of strings
6. How many ways we can implement the pagination
7. What is limit and offset and write the native query and related it with pagination
8. How do you handle the exception
9. Create the stream from an array
10. Why do you want to leave the current organization
11. If an API is down so what to use that it should automatically hit that API for an interval of time
12. Write a stream to remove the duplicates
13. What is Spring security
14. What is JWT
15. What is the difference between @Controller and @ExceptionHandler
16. Write a query
17. Explain current project
18. Why LMS is not deployed
19. In which way you are storing the Aadhar and PAN data in the database
20. How are you checking the CIBIL score.
21. How to create an immutable object
22. Why String is immutable
23. Give an example of immutable object
24. Why there is a need of immutable object
25. Structure of JWT

Company : Paramatrix (Kotak)

Questions:

1. New things in migration from mono to microservice
2. Use of micro service

3. Design pattern (MVC)
4. Hash Map internal working
5. how key is checked in hashmap if its duplicate
6. Instance and static variable its memory allocation
7. InstanceOf()
8. Private vs Protected with some Scenario
9. Encap in your project
10. equals and ==
11. Create Constructor for student (getter/setter)
12. Memory allocation of constructor
13. Garbage collector
14. Override and overload
15. Interface (types)
16. functional interface
17. List vs set
18. which collection allow no duplicate and insertion order
19. Linkedhashset and hashset
20. Create custom exception
21. What is class not found exception
22. Throw vs throws
23. Use of finally block
24. Write try catch finally in notepad
25. Exception propagation
26. what is thread
27. can two threads run parallel
28. thread pool
29. Executor Service
30. Wait and sleep differ
31. Synchron keyword
32. Stereotype in springboot
33. Actuator
34. notify and NotifyAll
35. Stream API example for prime number
36. @EnableAutoConfig
37. Security in microservices
38. @controller and restcontroller

Company : Echofeel Technology Pvt Ltd.

Questions:

1. How two microservices communicate with each other.
2. Where you used interface and abstract classes in your project.
3. What is immutable class.
4. How to create a immutable class.
5. In immutable classes the constructor is parameterized or non parameterized.
6. Collections you have used in your project.
7. How to create a HashMap.
8. Can we pass object as a Key in Map.
9. Hibernate
10. How can we do map the foreign keys in hibernate.
11. Which Java 8 features you have used in your project.
12. Lambda expression return type

Company : Ampcus Tech Pvt Ltd

Questions:

1. Establish communication between microservices
2. Secure RestApi
3. Jwt filters
4. Html document tag
5. Id vs class selector difference in HTML
6. In js when you declare variable what is difference keyword
7. HashMap,HashSet
8. Typescript
9. Oops 4 principles
10. Interface vs abstract class
11. Different approach of Multithreading in java
12. How to detect deadlock in java
13. Collection framework
14. RestApi all annotations in spring boot to create
15. Create RestApi in asynchronous environment how to take care in multithreaded
16. Spring cloud
17. Write a program to find all duplicate numbers in an array.

Example:

Input: [1, 3, 4, 2, 2, 3]

Output: [2, 3]

Company: Rebit

Questions:

1. Api gateway use
2. what is authentication & authorization
3. String="ABCXYZ123" find the sum of the digits
4. String ="aaabbc" find the character with second highest frequency
5. ACID property in dbms
6. Singleton design pattern
7. types of design pattern
8. @Transcation
9. Security filter chain in springboot
10. Executor service

Company: Rebit(RBI)

Questions:

1. integrate microservice
2. Feign client
3. Application.property what you write for microservice
4. if one microservice fail then how exception is handled(global)
5. intermedia and terminal operation in stream
6. Changing @repository to @component will it work
7. volatile keyword
8. try with resource
9. Serialization and de
10. json object
11. List {"one","two","three","four","five"}group it by length using stream api
12. Version Control in project

Company: NuSummit

Questions:

1. What is the difference between jpa and hibernate
2. What are joins
3. Describe the different types of joins
4. Which versioning tool you have used for your project
5. Designe maping
6. How do you define mappings
7. What database are you using in your project
8. How do you handle the exception in your project
9. What is your daily basis role
10. Explain the current project
11. Explain your module
12. What are the annotations have you used in your project
13. How database know that this model is table

Company Name : Bizinso

Questions:

1. How you handled multiple bidding.
2. How did you save the bidding info
3. What is @enableautoconfiguration
4. cache
5. how you managed exception handling
6. project architecture
7. configuration management
8. flat array
9. 2nd highest salary
10. hashmap
11. security discovery
12. how did you secure the micro services

Company Name: Infibeam Avenues Ltd.

Questions:

1. what is the main difference between java 7 and java 8
2. why default method is introduced
3. what is @Transactional
4. what are the different types of cache
5. give me the examples of functional interface
6. what is deadlock
7. explain full spring security
8. explain jwt in details
9. If JWT is exposed to any hacker then how will you protect
10. what is excuter service
11. explain java 1.17
12. internal working of hashmap
13. if there is collision in container then which data will be returned
14. how two internal microservices communicate
15. Suppose service A,B,C,D is there right and if A call B, B calls C but C is doen and C call D then what will happen and what will you do to run the program smoothly
16. what is discovery server
17. what is API gateway Explain in brief
18. what loggers have you used in your project
19. How many types of loggers are there
20. in Production which logger we have enable and which we have not to enable
21. have you used the log file like is there have you used file to save the loges
22. what is ajax
23. what to keep in mind to make filter in springboot
24. how to make the filter
25. what is the flow in microservice like when we hit the api from the external source
26. how have you handle the exception
27. give example of AOP
28. explain the flow to handle the exception using global exception handler mechanism
29. what is @ExceptionHandler
30. how to get the fresh bean
31. 31 .what is application context
32. how many type of bean scopes are there
33. how to make prototype bean
34. why string is immutable

35. if we create the string using new keyword then where it will be stored like in heap or SCP
36. why string is preferable as key in hashmap
37. if two threads try to read and write then what will happen and what we have to do to resolve it
38. explain arraylist
39. if we want to store the elements which should be not be duplicates and should preserve the insertion then we have to like which collections we have to choose
40. what is generics
41. why generics are used in collections
42. what are the features of java 7
43. when records are introduced
44. what is redis
45. where do you store the jwt and why
46. have you heard about interceptors in springboot not in angular
47. what is lookup method
48. What are the methods of streams
49. If I write two terminal methods one by one then what will happen

Company Name : Team computer

Questions:

1. Explain microservices?
2. Explain components in Jtw
3. Explain how are you handling errors in microservices?
4. Explain deadlock?
5. Write code for deadlock?
6. Java 8 features
7. Where you use java 8 feature in your project
8. Write java code to sort map with respect to its values
9. Write java code to iterate its keys
10. Write java code, if user enters value it should give respective key as output in map
11. What are the sorting algorithms you know?
12. What is the time complexity for bubble sort?
13. What is global exception?
14. Have you consumed any external api if yes, where?

15. You have studentdto class having name email city grade and age as properties, return list of e-mails where age is greater than 18 city is Mumbai and in ascending order of grade by using stream.
16. Which version of java and spring boot you are using?
17. What is Custom exception?

Company Name: Paramatrix

Questions:

1. What is microservices
2. Difference between spring and spring boot
3. What is spring cloud config
4. How it works cloud config
5. What is service registry
6. How the microservices will get restart
7. If application properties is used then why use springboot cloud config
8. Use of spring cloud config
9. Actuator in springboot
10. How spring boot manages dependencies
11. What are spring and spring boot annotations
12. What is 12 factor principal in microservices
13. Difference between monolithic and microservices

Company Name: Bajaj

Questions:

- 1)Print prime number between 1 to 100
- 2)ORM explained in your project
- 3) explained the implementation of abstraction
- 4) what is overriding in java
- 5) explain the final keyword with an example
- 6) collection used in your project
- 7) how to implement data base connection in your spring boot project
- 8) explained thread safe Collection

Company Name : FinQuest

Questions:

1. Java 8 features
2. Multithreading
3. Time complexity of hashmap
4. Inorder preorder postorder difference
5. array = {0, 1, -1, 0, 2, -3, -2, 3, -4, 9} find maximum sum subarray having max length subarray greater than 3.
6. how to optimize with Sliding window

Company Name - Team Computer

Questions:

1. explain the project and your responsibility in the project
2. Explain JWT implementation
3. What is sync explain in details
4. What is global exception
5. Explain microservices
6. Explain Jpa annotations
7. What comes under @springbootapplication
8. What is @componentScan
9. Difference between @ExceptionHandler and @ControllerAdvice
10. Why everyone in your organization switching jobs?
11. Java 8 features
12. Remove duplicate letters from list of strings using stream
13. Count number of letters present inside list of strings using stream

Company Name - Nimap Infotech

Questions:

1. Explain about your project — the main concept.
2. Deeply explain what design architecture you used.
3. What microservices were created in your project, and specifically for your module which microservices did you create?
4. Explain your module deeply.
5. What is Eureka Server, what are its alternatives, and why did you use Eureka?
6. If data is getting dense and you were manually monitoring logs, what automatic process can be used to monitor it?
7. In AIGForgeHub, what were buyers actually buying and how many RFQs were generated per day?
8. Admin will go through the bids — what is that concept?
9. In Spring Boot, what is the @Autowired annotation and how does it work internally?
10. What is Dependency Injection?
11. IoC container creates objects for injection, but if we can manually create objects, then why do we need IoC? (Apart from reducing boilerplate code.)
12. Given array ranges like [8,10] and [1,12], how will you find the union of these ranges?
13. What is JWT?
14. How is data stored inside JWT tokens and why do we create tokens?
15. For password encoding you used hashing, but if encryption + hashing both give secure patterns, then why does JWT not use hashing?
16. Difference between hashing and encryption.
17. Can encryption be decrypted? If yes, then how does this relate to JWT?
18. When using BCrypt hashing for passwords, during login verification are you “unhashing” the password?
19. Your token expires after some time — how does the browser know that the token is expired?
20. If you are given an array representing a very large numeric range, e.g., [0, 10,000,000], and you must find all unique numbers in the range — how would you solve it? What is the biggest time-complexity challenge?

Company Name - Axis Bank

Questions:

1. Have you heard about sharding partitioning in database
2. Executor service in java
3. Why we use executor service why not manual thread class
4. What is DI in spring boot
5. What is Criteria API in Hibernate
6. In Spring Boot, what is the @Autowired annotation and how does it work internally?
7. Array of 10 lakh records I want data which elements having even places
8. How to tackle with the traffic for one db
9. How to create data management
10. Consider a case, a client is bombarding api then what we have to do

Company Name - Teak's kapil group

Questions:

1. What is microservices
2. What architecture did you follow
3. Method overriding and Method overloading
4. Code for prime number
5. Find Recursion of string in the sentence

Company Name - Shreeji Avenue

Questions:

1. How will you handle large data
2. How will you automate the data
3. How will keep data consistent across the module
4. Implementation of attendance with login and logout
5. Cron jobbing
6. How will you migrate the modules in the production
7. How will you manage HRMS and unit management separately
8. How will you automate the mail
9. Can you apply approval based attendance and how
10. How the data will be updated on real time bases

Company Name : Transbnk

Questions:

1. JWT, OAuth2, or Spring Security
2. first level and second level Cache
3. monolithic and microservices difference
4. circuit breaker
5. MySQL and normalization
6. Key principles of clean coding practices
7. eventual consistency in microservices architecture?

Company Name - Simple Logic

Questions:

1. What are java 17 features
2. Explain sealed class
3. In your project where you use java 17 features
4. code for string index
5. use of intstream
6. use of range

Company Name : Inferyx

Questions:

1. what is clean code or bad code
2. what is liskov substitution principle explain with code
3. Explain Aig forgehub project and your module
4. how do you follow clean code in your project
5. what is REST service
6. we need to use encode incoming data tell me mechanism that we use
7. For encoding do not use library write down code

Company Name – Transbnk

Questions:

1. How will you store the sensitive documents in cloud
2. Will you hash them or not
3. What will be the naming conventions
4. How will you retrieve the document from the cloud
5. What is @transcation ?
6. Functional interface
7. Write query to find largest second number
8. And some program scenerio based questions
9. Encapsulation in java
10. Will multipart take multiple file ?
11. Different between controller and rest controller
12. Want to send file between microservices how the document storage
13. How will you find the file from the cloud
14. How the naming conventions for file
15. I upload my Aadhaar card or PAN card, okay? And your system uploads it onto the cloud, okay? Now, somebody goes to the cloud and edits my Aadhaar card or PAN card, and he keeps the name same. He changes my number or changes the photo. So when the application manager is going to download and see my application, he will download the same file with the same name. But when he opens it, he will see something else. So how can I correct this?
16. What will be limit do in mysql

Company Name : Ameya Infovision Pvt Ltd.

Questions:

1. Suppose we have outer for loop and inner for loop and I want to terminate both the loops without using any third variable when j is equal to 5 (j = 5).
2. How do you process a huge list (millions of records) using Stream without OutOfMemoryError?
3. Difference between map() and mapMulti().
4. Implement a custom Collector.
5. What are lazy and eager operations in streams.

6. Explain Spring Security.
7. Explain JWT Authentication.
8. Explain CSRF.
9. Suppose you have two properties file and both the files contain same key but with different values so how you will action desired value in the controller.
10. Explain Connection Pooling.
11. Explain exception handling.
12. How do you handle checked exceptions inside a Stream pipeline.
13. How do you version microservices APIs safely.
14. How do you handle schema changes in a microservices database?
15. Explain JdbcTemplate.
16. Difference between JDBC vs JdbcTemplate.
17. How do you handle failure propagation across microservices.
18. How do you secure internal microservices communication.
19. There is response and request so if the which you will encrypt and decrypt.
20. What is materialize view.
21. Difference between union and union all.
22. Difference between count(1) and count(*).
23. Foreign Key Vs Unique key
24. window functions
25. Procedures and functions

Company Name : Pycraft solutions

Questions:

1. What is the difference between int and long .
2. What is the data type of 50,000 and how?
3. What are the java 8 features.
4. What is the difference between functional interface and interface.
5. Difference between Feign client and Rest Template.
6. Difference between Method Overloading and overriding .
7. Example of Method Overloading.
8. Program for finding the second largest element of array.

Company Name : FYN Tune

Questions:

1. What is @Transactional
2. JPA pageable
3. Hardest bug you solved in your project
4. Constructor injection or field injection which one is best
5. What is dependency injection
6. What is kafka
7. If payment service is down then what you do
8. Why you do not use kafka

Company Name : SBI

Questions :

1. Explain Collection Framework
2. Core java fundamental
3. Four pillar
4. What is spring security how to api
5. Explain microservice architecture
6. Explain rest api principal
7. Rabbitmq
8. Aws

Company Name : Teams company

Questions:

1. How to create String
2. Collection framework
3. Hashmap vs hashtable
4. Hashmap internal working
5. Arrylist vs linkedlist
6. Oops pillars
7. Jvm memory management
8. Can contructor Override?

Company Name : Tansbank

Questions:

1. What is the difference between hashmap and concurrenthashmap
2. During deployment 500 errors are coming what will you do
3. After checking logs you go to the container to check
4. How to debug a slow query and how to optimise it
5. Viewchild in angular and about the service
6. Lifecycle of components
7. Asynchronous communication
8. How to implement the Asynchronous communication
9. What is aot in angular
10. How to optimise angular
11. Debounce API call
12. Httpinceptor
13. What is observable and promise
14. functional interface
15. what is hashcode
16. @function interface
17. What is java 8
18. What is the use of optional
19. @Autowired

20. When to use @Qualifier
21. How to structure a microservices project
22. Unable to do multiple transitions .how should you debug it
23. Parent child communication in angular
24. If there is no relationship between child components and parent component how will you make them communication
25. What is guard in angular
26. DI in spring boot
27. Security in frontend

Company Name : Thermolab

Questions:

1. Java 17 features
2. What is hashmap internal implementation
3. Monolithic and micro services difference
4. What the micro services used in project
5. Spring security
6. Steps to upload files
7. How do you handle exceptions
8. What is feign client
9. Challenges faced in projects
10. @value annotation ?

Company Name : Transbnk

Questions:

1. Spring Boot architecture
2. why String immutable
3. how to handle Group of database operation as single unit
4. SQL query to identify duplicate records in a table
5. Handle exception in class
6. angular components architecture

7. Components to component communication in angular material
8. Inter relation between components
9. How to increase the angular performance
10. What we will use navigation on one component to another
11. what is Shared service for communication
12. Passing the object what we use in navigation
13. Can we pass a data on navigation is possible
14. what is AOT
15. How to optimize the performance application
16. Stream and parallel stream difference
17. Hashmap and concurrent hashmap difference

Company Name : Paycraft Solutions

Questions:

1. What is Overloading and Overriding?
2. Is Possible private method can Overload and Override?
3. Is Possible final method can Overload and Override?
4. Constructor Overloading and Overriding is possible?
5. Difference Between Throw and Throws?
6. Checked and Unchecked Exceptions?
7. What N+1 Query Problem?
8. Write a Program for find the average marks of Students using Stream?
9. Write a program to find out the Student Name marks in between 10-20,20-30,30-40...90-100 marks

Company Name : Team Computers

Questions:

- 1) Brief your project LOS
- 2) Annotations used in Spring boot

- 3) JWT Dependencies
- 4) How do you handle Transaction
- 5) Which Orm tool you are using in your project
- 6) Working of spring data jpa
- 7) I want to perform multiple operation but there is case where exception is occurring but i want the previous transaction to be done what should i do...is there any way to do this
- 8) How can we handle service failures in Microservices
- 9) how can we implement retry mechanism
- 10) Features of java 8
- 11) Functional interfaces
- 12) Can we extend functional interface
- 13) Use of functional interfaces
- 14) what is lambda expression
- 15) Have you heard about Observables
- 16) Exception handling in spring boot
- 17) There is list of employees having details id empname empdept empsalary location using stream fetch employee names whose dept is IT and salary greater than 25000 sort by name in descending order
- 18) what will map do here
- 19) In collection which collection you have used
- 20) Internal working of arraylist
- 21) is list is thread safe
- 22) linklist is thread safe
- 23) Difference between arraylist and linklist
- 24) If i want to modifications on list which interface we will use

25) Why arraylist is fast

Company Name : C2L BIZ Solutions Pvt Ltd.

Questions:

1. Explain Inheritance
2. Can we call Parent function in child class
3. Dont want to use the super
4. What is difference between abstract class and interface
5. Create one employee class create 3 objects of that employee class then initialize object with salary attribute then create one function do sum of the salaries of all three employees then call that function and display that total salary
6. Take input as list and do the sum in that function
7. If suppose i have created that method in the employee how can i call that method if it is not static
8. Sample json related to employee
9. What is component and how you can create it
10. How can i get a jsp value in js
11. Rest APIs
12. How will you call a post api in post man
13. Dependency injection
14. Purpose of creating bean in spring
15. What is CascadeType.ALL
16. What diff between primary key and unique key
17. To delete entire table data without disturbing table structure

Company Name : Wipro

Questions:

- 1.application.yml vs application.properties
- 2.Rest API in spring security
- 3.Internal working of hashmap
- 4.Components and component scan difference
- 5.run vs start thread
- 6.Without run thread is start
- 7.jwt and filters in jwt
- 8.Selenium tool

Company Name : SBI

Questions:

1. How you Communicate one api with another
2. Memory managemnet in hibernate
3. Diffewnce between load and get method in hibernate
4. Lazy loading
5. Difference between abstarct and interface
6. How can we achieve multiple inheritance
7. In how many you can crete string
8. What is Difference between them(String)
9. Method refrence in java
10. Advantages ofFunctional interaces over tradional interfaces
11. Class loader in java

Company Name : rebit

Questions:

1. Their are mutiple roles in los so how do you manage the roles

2. I have an employee class id name age and salary employeetype i wanted to filter the object whose age is greater than 35 using stream
3. Now in this i want to filter the that as employee type as senior
4. I am having a table called student columns are id name and courseid their is another table Course columns are id coursename
5. And i want to create a api resonse which will give me json response
6. Key as string student name and course will have the values of coursenames
7. Write query for the same....Which join is this

I am having variable x=2

where y=x

X=5

I will do console log what will be the output

Company : SBI

Questions:

1. @Qualifirer
- 2 . Explain MVC Architecture
- 3.How to encrypt field
- 4.Spring Security
- 5.String /stringbuilder/stringbuffer
- 6.@sessionscope
- 7.Design pattern
- 8.Advantage disadvantages of indexes
- 9.missimg no of list using min max

Company : TransBnk

Questions:

1. So let's say I want to create an endpoint. The job of the endpoint is to carry some data. What does this data carry is first name, which is mandatory, and the max length is 50. And then I just have two fields, first name, max length 50, and it's required. And another one is age, which is a numerical field, and I want to put a validation that it should be less than 60. But it's an optional field. It's not mandatory. The user can skip it. So I want to take this data, let's say it's coming from a sign-up form. I want to take this data and process it in the database. Can you walk me through step-by-step process? That's how you're going to write an endpoint, something like this.

2. I have this first name. I want to make sure that this name is unique in the database. Whenever a data is coming, I just want to verify whether this name is already there in the database or not. If it's there, I want to throw back an evaluation error that this name is already occupied. Let's rename this and call it username. We need to verify that this username is already occupied or not. If it is occupied, we need to throw a validation error. How are we going to implement this?

3. How to check the email address is matching the respective format or not.

4. What is the difference between an exception and a validation error? That is, this annotation validation is going to take care of my uniqueness check of user name? Or do I need to do something else?

5. JWT AUTHENTICATION

Company Name : NeoSoft

Questions:

Write a program which can take input as integer and give output as Binary format.

Eg.

Input: 8

Output: 1000

note: without using any predefined method

Company Name : Cbt infotech(REBIT)

Questions:

1.ID, name, salary, gender, and designation, four columns are there. I am having their setters and getter method into it. and I am having one Hash code method into the employee class. What is return type of hash code?

2.EMP1 and EMP2 Where EMP1 employee name was Dhanshree And EMP2 object employee name was Dhiraj What I did, I have created one HashMap object I have added object into the map like map.put E1 as a key, string E1 as a key EMP1 as a object Similarly, I put E2 as a key and EMP2 as a object into the map Clear? Now, I wanted to get the E1 object from the map which is EMP1 But, what I did in between I went into the Employee class I modified the hashCode method saying that hardcoded value 1 as a return type digit 1 So, when I am going to print the E1 object from the map like map.get of E1 what object it will return? Dhanshree or Dhiraj Yes, tell me, which one it will return?

3.E2 will give the same object, right? E1 and E2? E1 from the map. If I am trying to get the E1 object from the map, it will give the same object, right? .

4.Having one sentence Can you write the piece of code to find the first duplicate word in the sentence.

5.I am having one employee list. The same employee list already I explained to you. What I need to find out gender-wise, designation-wise gender count. Using a string. Designation-wise gender. Gender count. For example, SQL developer female count is 2 Male count is 1 .Can you write that string code using Java 8?

6.I am having one API You need to call and display that value into the table. You call that API and show just two columns into the table.

Company Name: Aurionpro

Interview Questions:

1. Difference between string literal and string object
2. Runtime exception
3. What is the use of @Qualifier in Spring?
4. Spring Boot is taking too much time to start. How do you improve startup time
5. Challenge face like that in your project
6. If there is no Entity/Configuration class, how can you access that table data in Hibernate?
7. How can I access controller using browser & We don't have the backend part and how do I identify the controller through browser
8. `String s1="ABC" String s2=("ABC)` `system.out.p(s1==s2)` if false what is correct way

Company Name : In Solutions Global

Interview Questions:

1. What is Java?
2. Why Java?
3. Why not other programming languages?
4. What is a Functional Interface?
5. Why do we use Functional Interfaces?
6. Give a real-world example of a Functional Interface.
7. What is the difference between Interface and Functional Interface?
8. Explain the complete system architecture of your project.
9. What is an API Gateway and why is it used?
10. What is a Discovery Server and why is it used?
11. What microservices are created in your project?

12.If every microservice has its own database, is it possible for two microservices to use one database?

13.If User Service wants the count of departments from another microservice's database, how can it access that data?

14.In JDBC, how is the connection formed between Java and the database?

15.Can we set limits while establishing the JDBC connection link?

16.What is List and name 5 methods of List.

17.What is Map and name 5 methods of Map.

18.What is Stream and name important Stream methods.

19.Is HashMap thread-safe?

20.Explain the internal working of HashMap.

21.Given input string "hello world", how do you get output "olleh dlrow" using string methods?

22.Solve the same "hello world" → "olleh dlrow" problem without using string reverse methods.

23.What is Optional in Java and how do we implement it?

24.What is pagination and how do we implement it?

25.What are validations?

26.How do you validate email in Java? (With code)

27.What is Singleton?

28.Give an example of Singleton.

29.Name 5 validation methods used in Java.

30.Name 5 Optional class methods.

Company Name : in solution global

Interview Questions:

- 1) what is angular
- 2) why not other programming language
- 3) which version using in angular and springboot
- 4) details explained in MVC architecture for your project
- 5) what is rest api?
- 6) what is your responsibility in your project

Company Name : NeoSoft

Interview Questions:

1. Write a program which can take input as integer and give output as Binary format.

Eg.

Input:8

Output: 1000

note: without using any predefined method

Company Name: Servosys solutions

1. What is singleton
2. Difference between singleton and prototype
3. What is Output of the following codes

```
map.put(null,null)
```

```
map.put(null,null)
```

```
map.put(null,null)
```

```
Sout(map.size())
```

```
String s1="hello";
```

```
StringBuilder s2=new StringBuilder("hello");
```

```
sout(s1==s2);
```

```
sout(s1.equals(s2));
```

4. Property files in an application, instead of that, I will put in a git So from that git I want to access those property files. So what is the approach for that?
5. Suppose we have multiple property file how to you handle it
6. How to secure properties
7. There are duplicate elements also. So, I want count of each element, how many times that element occurred.
8. How to write Multiple joins query in spring boot

Company Name : Smart e

Interview Questions:

1. Why do we prefer spring boot
2. Advantages of spring boot
3. @Autowired
4. Without @Autowired how will you inject ?
5. What are the annotations you came across
6. What exceptions will occur and how will you handle it ?? With any conditional statements
7. what will be the output

```
String s1 = null ;
```

```
String s2 = "sample"
```

```
String S3 = new String("sample")
```

```
Sout(s1 == s2 )
```

```
Sout(s2==S3)
```

```
Sout(s1.equals(S3)
```

8. Count the number of rows for each department_id

NULL department_id should NOT be counted

BUT you do NOT want to use a WHERE clause

Still want all rows grouped by department_id

Company Name : Servosys

Interview Questions

1. what is gateway?
2. difference between SLF4j and Log4j
3. ControllerAdvice
4. what is Exception Handler
5. what is Abstract Class
6. difference between Abstract class and Interface
7. How do you achieve 100% Abstraction
8. To print the character frequency of your name and ignore the space
9. Time complexity of this code
10. Space complexity of this code

Company Name : Bajaj Finserv

Interview Questions:

1. You have to process the string or statement, whatever you call it as, and print the words out of it, and for each word you will be printing the count of that word, which means how many times that word is repeating in a statement, so different words like India is my country, I love my country, so your output would look like India equal to 1, because India is only one time, is equal to 1, my equal to 2, country equal to 2 likewise.
2. Now want the words in order India is come first like that
3. Is there any better way of handling this program?
4. what is getAllDefault() method?
5. How do you connect to the MySQL database from springboot?

6. what is Maven?
7. Exception handling
8. Method Overriding
9. Final Keyword
10. Aws- EC2

Company Name : C2L

Interview Questions:

1. what was the API that you built in your project?
2. what data was exchanged in these APIs
3. JSON full form
4. datatype in JSON
5. Exception in java
6. NullPointerException
7. what is Aja?
8. Ajax example in project
9. Api structure in list of employee id name salary 3 employee in json structure
10. In the JSON body, I need a list of employees wherein each employee will have an employee ID, a name, a date of joining, and a SAS. This is the information of an individual employee. So you show me like say 3 employees coming in my JSON.
11. Create class Employee with attributes as eid, name, gender, dtofloin, salary
 - a. Initialize them using constructor.
 - b. Create 3 instances of this Class and assign values.
 - c. Add these objects to ArrayList
 - d. Add function computeTotalSalary with Employee List as input parameter to the haezion
 - e. Call the above function and print the returned value. With all import to run
12. If I wanted you to put it into a HashMap instead of an ArrayList, or in addition to the ArrayList, I want you to store and employ information in a HashMap, what would be the difference?
13. In program what is key and value in hashmap

14. To store the employee information in a database, I still need the same thing as employee ID, I need the name, the gender, and the date of joining. And I need to store the addresses of this employee. Addresses could be, one employee can have, say, multiple addresses. We can have a firm address, we can have an office address, we can have a permanent address. So in each address, again, I might have, say, address 91, 92, 53, 53, 58. So can you tell me on a notepad, what are the different tables, what are the different columns, and what are the relationships?
15. I am selecting the employee ID, the name, and the address details of the home address. What is my query be like?
16. I want to display the employee ID name and family. So, how would my HTML look like? Assuming it's a static data.
17. Syntax for html table code

Company Name : NeoSoft

Interview Questions

1. Write a program which can take input as integer and give output as Binary format.

Eg.

Input:8

Output: 1000

note: without using any predefined method

Company Name : In solutions Global

Interview Questions

- 1.Introduction
- 2.Since 2.6 years you are working on this Security Module?
- 3.How many projects are currently ongoing
- 4.What is Your role in this project
- 5.Do you Know Azhrudhin Sheikh and Anas Sheikh
- 6.What is Java

7.Why java

8.if i want to create a constructor as private can i make it

9.if i want to acheive singleton design pattern using that how can i acheive

10.what are implicit objects of jsp

11.jstl tag

12.How to consume API in ajax

13.Have you used procedures or only JPA

14.How can i create a repository

15.How can i consume an external API

16.Which version you are using

17.What validation you have used

18.StringBuffer vs StringBuilder

19.Explain concept of String Constant pool

20.How can you create a Object

21. How can i achieve a singleton pattern if i am having constructor as private

22. Is stream thread safe

23. So if i want to make the stream thread safe then

24. Servlet lifecycle

25. Bean lifecycle

26. Expalin the steps of JDBC

27. Five methods of stream

28. Five methods of Map

29. Which collections you have used in your project

30. Which Api is used for validating the pancard of user

31. List vs ArrayList

32. List vs Array

33. How do you implement validation in your project

34. Which dbms you are using

Company Name : NCS Soft solutions

Interview Questions:

1. Difference between group by and where
2. What is mean by wrapper class in java
3. Memory management in java
4. Thread in java
5. Purpose of using synchronous keyword
6. Class not exception and class not found def
7. What is exception handling
8. What is collections
9. Db input stream and output stream
10. Iterators and for loop difference
11. What is mean by annotation
12. Request mapping use
13. What is oops
14. Write java code to convert string to array and find duplicates
15. What is Rdbms
16. Db primary and foreign key
17. How unique constraint allow null value
18. Db groupby and having difference
19. What is index
20. Syntax to create index
21. What is join
22. How to create table syntax
23. How to alter syntax
24. Truncate and delete difference
25. Truncate and drop difference

Company Name - In solutions Global

Interview Questions:

1. How to import external api
2. How to secure apis
3. What is collections
4. What is encryption
5. What is rbac
6. Csrf how to implement
7. What is api gateway
8. What is the content type of if i have one download api
9. What is rest template, have u used in ur project
10. What is difference between put and patch
11. How do you implement validations
12. What are validations and give some
13. What are types of object class
14. How to write custom exception
15. What are joins and types
16. What is ajax and syntax
17. Which springboot and angular versions you are using
18. What are status codes
19. If i am calling one api and that is not present then what status code will come
20. You both have same projects so are you working in same team?
21. I want inter communication of microservices then how to do , dont use feign client
22. How to implements roles and how get to know which role has what permissions to do or view
23. And how to secure that roles
24. What is content type for form data
25. How to validate the email
26. Exception hierarchy
27. Difference between not null and nullable
28. What is optional
29. And have you used optional in your project
30. And many more scenario based questions on api

Company Name : NeoSoft

Interview Questions:

- 1.Can you differentiate monolithic and microservices?
- 2.which architecture you prefer and why?
- 3.We have to secure user data. For that, what are the security measurements you are going to take?
- 4.Unit testing in backend
- 5.Circular dependency? how can we prevent?
- 6.Explain your project model for angular
- 7.Pipes in angular
- 8.Since it is a banking project, you are going to enter lots of data, which is complex. If you want to enter other card number, there will be having some pattern. If you want to enter PAN card number, there will be having some pattern and rejects. So, like that, we will be having different types of documents. Every document will consist of some rejects or patterns. So, I want to inform such a way. When a user started entering the data, it should be validated automatically. So, how are you going to develop this?
- 9.Dependency injection in angular
- 10.Schedulars in spring boot

Company Name : Neosoft

Interview Questions

1. Entity states
2. Environments in Spring
3. Stereotype notations in Spring
4. State management in angular
5. security measurement in java spring boot
6. Idempotancy
7. JPA why and how
8. Checked vs unchecked exception

9. send data from Child to Parent in angular
10. Hook lifecycle
11. Interceptor
12. Testing in java

Company Name : Servosys

Interview Questions

1. OOPS Principles
2. Functional Interface
3. Object class Methods
4. Thread Lifecycle
5. Exception
6. NullPointerException
7. Suppose I'm performing operation on file db operation like insert update so which exception I should use
8. Autoboxing
9. Type casting
10. Difference between arraylist vs linkedlist
11. Difference between hashset vs hashmap
12. Suppose you have custom object i.e. employee object putting that in hashmap I want to check the duplicate how to achieve that using hashset
13. what is TreeSet
14. To put the custom employee object into treeset in the order of Eid
15. Difference between Comparable vs comparator
16. both are use for compare what is the main difference
17. String a="agdh" in which memory it will be stored
18. we have a string pool in String why it is given
19. you have to queries one is design by join and subquery so which is preferred
20. what is Predicate
21. Flatmap

Company Name : In solutions

Interview Questions:

1. project overview
2. How did you create API's
3. How do you handle long-running operations in a REST API
4. How do you ensure backward compatibility when evolving an API without disrupting existing clients?
5. How do you test API throttling , how did you introduce it in your applications
6. How do you ensure security in API design, especially when handling sensitive data?
7. Input -Hello world output-dlrow olleh write a code
8. SQL query from get department id from department table and designation for employee table
9. a code was given which was regarding encapsulation what will be the output
10. Global exceptions
11. Explain the difference between orchestration and choreography
12. Describe how you would implement service discovery
13. Questions regarding default singleton
14. Questions regarding the cibil score in los
15. You said injections provided by spring boot make things easier so can you tell me one drawback of injections
16. Difference between spring and spring boot
17. Questions regarding jsp
18. Servlet life cycle
19. JDBC connections steps

Company Name : In solutions

Interview Questions:

1. Project Overview
2. What is Your role in this project
3. Explain architecture for your project
4. What is Java
5. which version of angular and springboot are you using
6. JWT authentication
7. what is rest api?
8. What is api gateway

9. What Apis have you used in your project
10. How did you create API's
11. How to secure Apis
12. How do you ensure security in API design, especially when handling sensitive data?
13. What validations you have used
14. JDBC connections steps
15. Swap two number without using third element
16. SQL query to get department id from department table and designation for employee table
17. They gave me a code and asked to write what i think the output would be

Company Name: Qtech software solution

Interview Questions:

1. Project Overview
2. Difference between interface and abstract
3. What is @transactional
4. How you created Api
5. Hashmap internal working
6. How microservices work and its advantages
7. How do you call microservices
8. What is feign client advantages
9. explain spring security
10. Solve this

Input S =aabbccdd

Output = a2b2cada

Company Name : In Solutions

Interview Questions:

1. How many projects did u work
2. Explain current project
3. What is rest templates
4. How you will consume apl with help of core Java
5. What happens internally when RestTemplate makes an HTTP call?

6. How do you retry failed calls using RestTemplate?
7. Internally, how does RestTemplate choose message converters?

Company Name : In Solution Global (ISG)

Interview Questions:

1. Project overview
2. Fullform of JSP
3. Api you had created in aig
4. How to consume extenal api , differnet types of approch
5. MVC architecture
6. Stereotype notations
7. If i need to send data to jsp which annotation to use controller or rest controller
8. Can we use controller and restcontroller at the same time
9. Threads
10. Thread lifecycle
11. Executor framework
12. Collection framework
13. How to travser map
14. Design pattern used in project
15. Singleton write code for it
16. Access modifier scenario based questions
17. Jar vs var which one you use , why and why not the other , where you define it.
18. Types of constructor
19. There is an inner class which contain a variable how to access it in other class
20. One project multiple database how ,write code
21. How do you connect angular to springboot
22. Servlet lifecycle ,its methods , classes
23. Object of Jsp

Company Name : SBI

Interview Questions:

1. In dhanshree how can we find double ? Another logic for duplicate
2. Suppose in hashmap there key is same value is different
3. In operator in mysql
4. 1 is key and value is Dhanshree then 1 is key and value is manyar then what we do
5. Hashmap or hashset difference
6. In array 1 to 100 elements are there divide by 10 how we do

Company Name - servosys

Interview Questions:

1. Angular versions
2. Micro service design patterns
3. Mvc architecture
4. What is jwt
5. Logging in microservices
6. What is application server
7. What is web server
8. Which application server and web server you have used
9. Index in mysql
10. Java Program to Remove Duplicate Elements From an Array (No Collections)
11. What is time complexity
12. How to decrease time complexity
13. What is merge sort and bubble sort
14. Name- Saikiran Chindam
15. Company name - procurant
16. Distributed transaction
17. How to handle the many to one relationship
18. Major advantage of using autowired
19. Logging mechanism in exception handling
20. Major difference between service and component
21. Difference between service and component

- 22. Major advantages of microservices
- 23. How to authorise apis

Company Name : NuSummit

Interview Questions:

1. Intro
2. Features Of java
3. Features of java 8
4. What is the use of functional interface
5. Difference between comparable and comparator
6. Difference between list and set
7. Why set is not allowed to store duplicate
8. Fail fast vs fail safe
9. How to avoid concurrentmodificationexception
10. I want to iterate the list and i want to add some element in the the list i get exception
how to avoid that
11. Features of spring boot
12. Profiles in spring boot
13. Create a one integer array and take elements like 1 0 5 7 0 6 4 0 2 0 8 0 and i want to
shift the zeros to right side
14. write a program to reverse a string
15. Now I want to check that string is palindrome or not

Company Name : Servosys

Interview Questions:

1. Tell me about your Project
2. What is HTTP Methods
3. Difference between GET, POST, PUT, DELETE
4. how to upload the file
5. what is SQL Injection
6. write program Key as String and value as map

7. Define a Map
8. Exceptions in Spring Boot
9. Difference HTML id and class
10. Explain Cross- site Scripting

Company Name : Furation Tech(SBI)

Interview Questions:

1. collection Framework with Example
2. Oops Pillars with Example
3. Microservice architecture
4. Exception Handling
5. RabbitMQ
6. AWS EC2

Company Name : In solution global

Interview Questions:

1. Http exception
2. Oops
3. Resttemplate
4. Stream api
5. Collection
6. Optional class
7. Design of your application
8. external api call with resttemplate not by feinclient
9. file txt file file name so how you write logic
10. which api u created logic

11.write code for reverse string

12 optional class use for loop and print this is not null

Company Name - V2stech

Interview Questions:

1. Method reference in java 8
2. Purpose of method reference
3. How is lambda connect to functional interface
4. Memory management in java
5. Difference between in heap and stack memory
6. Heap vs stack in terms of thread
7. Create a post api that accepts a user object with name and email and return "user added"(name)
8. Where it will store

```
String s = new String("Hello");
```

Company Name - abstract layers

Interview Questions:

1. About the projects and past projects
2. Find duplicate and count duplicate without using any built-in methods
String - "I LOve India";

Company Name : In Solutions Global

Interview Questions:

1. Introduction
2. What is Java?
3. Which Java version you are used in your project?
4. Which Spring Boot version you are used in your project?
5. Pillars of Java?
6. Difference Between war and jar?
7. Reference Object in Servlet?

8. Implicit Object in JSP
9. JPA Annotations
10. What is Many to Many Mapping?
11. Implicit Object in JSP?
12. WAP to reverse the string.

String : hello world

Output : olleh dlrow

Company Name : NuSummit

Interview Questions

1. Intro
2. Walk me through your day like what is your daily basis roles and responsibility
3. Are you a part of UAT testing
4. Do you involved in any depolyment process
5. Have you talked with your client or interact with him for BRD
6. If you get a requirement then who is responsible for the explanation of all that BRD
7. If you have any doubts whom do you contact
8. who is responsible for merging all the code
9. What type of Tesing you have done in your project
10. Where to deploy the jars after production
11. You have said Securing api can you explain me how you are securing the api
12. Jwt Explanation
13. Java 8 Features
14. Method reference
15. Functional interface
16. Create a lambda expression that adds two numvers and gives the sum
17. If the object and method name is same will it give error in the above
18. Declare an array of integer 1 2 3 4 5 6using stream i want the number which are divisible by 2
19. Features of Java 17
20. What problem record class solves
21. Is it similar to lombok
22. Count of male and female from list of employees using stream employee

23. Difference between webserver and application server
24. Eureka's purpose in microservice
25. How to create eureka server
26. How you manage the request coming from client
27. How do you handle exception in micro service
28. @around annotations in aop

Company Name - Vizpay

Interview Questions:

1. What is api gateway
2. What is microservices architecture
3. What is eureka server
4. What is sql
5. What are stored procedures and syntax
6. How you are verifying the correct pan number

Company Name : Fable Fintech

Interview Questions:

- 1.Elements in jsp
- 2.Jstl cortex
- 3.Access specifier in java
- 4.What is interface
- 5.Difference between abstract class and interface
- 6.Exception
- 7.Http methods
- 8.Http status code
- 9.Features of restful api
- 10.Exception with annotation

11.What is abstraction

12.interfaces can have methods?

13.Various types in inheritance

14.Some common code in one JSP, There is a one JSP which has a common code that can be used throughout the multiple JSPs, So I want to use that code in another JSP. how can I use?

15.<%@ include file="common.jsp" %> ,<jsp:include page="common.jsp" />

Difference between both mechanism

16.Coding question on the completed task-When a transaction ID is added to a field, there will be a drop-down for the label to be active, and the value should be Yes or No. If the particular record is active or not, we can select from there and add it into the database.

Company Name : In Solutions Global

Interview Questions:

1. Project overview
2. what is rfq
3. http method
4. difference between spring and spring boot
5. why spring boot and what are annotations
6. what is @transactional
7. jwt token
8. working flow of jwt
9. what is spring security
10. what is microservices how its work
11. what is feign client
12. scenario based question to fetch 2000 entries from parent class and child class have same entries
13. which annotation used to connect angular in spring boot
14. what is api gateway
15. oops pillars
16. what is collections

Company Name : Mirae Asset

Interview Questions:

- 1.Explain whole flow of project
- 2.Explain api gateway in your project
- 3.Explain ratelimiting
- 4.If i want to add feature of ratelimiting in api gateway how we are going to apply
- 5.Implement rate-limiting or give me architecture
- 6.Java 8 features
- 7.which features you have used in your project
- 8.Do you know about ComplitableFuture
- 9.if multithreading was their why did ComplitableFuture come in picture
- 10.How a lambda funtion is used
- 11.Stream api in los
- 12.What if i have to use multithreading in stream api
- 13.Optimizing query
- 14.Redis

Company Name : Transbnk R1

Interview Questions:

1. Db Abstract and interface
2. Functional inrerface
3. Jaca 8 features
4. Optional
5. Equals and ==
6. Hashmap internal working
7. Thread cycle
8. Voilatile keyword
9. Design patterns you know
10. Annotation used in project

11. Primary and qualifier
12. @Transactional
13. Find the 6th highest salary in mysql
14. Write logic for frequency of number in an array using java 8 features
15. Observable vs promise
16. If two services are there and one fails what to do

Company Name : Transbnk R2

Interview Questions:

1. RestService
2. Http verb
3. Can we use get instead of post
4. What is microservice
5. What is a Bad request
6. 400 vs 500 status code

Company Name : Crisil

Interview Questions:

1. Write a java program

Input (cities):

"Delhi", "Shanghai", "Dhaka", "SaoPaulo", "MexicoCity", "Beijing", "Mumbai", "Osaka"

Expected Output:

Count how many city names have the same number of characters.

Company Name - Servosys

Interview Questions:

1. What is cross site scripting
2. What is difference between id and class
3. How to consume api on frontend
4. What is sql injection

5. How to upload file
6. Find the longest consecutive increasing subarray in a given array with index

arr={ 1,5,6,7,9,10,11,12,13}

output : 9,10,11,12,13

Company Name : Applied cloud computer

Interview Questions:

1. What is microservice
2. How you communicate between microservices
3. Diff rest template and web config
4. Explain actuator
5. Exception handling types
6. Diff component and service
7. What is rest service
8. Frameworks in java
9. Threads and its life cycle
10. Transaction internal working
11. Hashmap internal working
12. Write a sample code which contains all java 8 features
13. Write a code for string = A A B A B to check if its a palindrome or not and if not then make it

Company Name : V2STech Solutions Pvt. Ltd.

Interview Questions:

Given a list of non-negative integers, return an integer list of the rightmost digits.

Test Cases :

rightDigit([1, 22, 93]) → [1, 2, 3]

rightDigit([16, 8, 886, 8, 1]) → [6, 8, 6, 8, 1]

rightDigit([10, 0]) → [0, 0]

1. Write code for HashMap convert into List.
2. Internal Working of HashMap.
3. Difference between @Repository and @Component.
4. Versioning in SpringBoot.
5. Heap and Stack Memory Difference.
6. Garbage collection in Heap
7. checked and unchecked exception.

Company Name : Crisil

Interview Questions :

1. Write a java program

Input (cities):

"Delhi", "Shanghai", "Dhaka", "SaoPaulo", "MexicoCity", "Beijing", "Mumbai",
"Osaka"

Expected Output:

Count how many city names have the same number of characters.

2. Difference between == and ===
3. Second highest salary sql query and repository code

Company Name: Applied Cloud Computing (F2F)

Interview Questions:

1. Why Java?
2. What is Exception Handling
3. How do you handle exceptions in your project
4. Difference between ControllerAdvice and RestControllerAdvice
5. Singleton class
6. How do you achieve thread safety in singleton class
7. Why String is immutable in Java
8. What will happen if the String is mutable

9. What happens when a collision occurs in HashMap
10. When will you prefer LinkedHashMap over HashMap
11. If a service or API gives results in 2 ms and in production it takes 2 sec, what could be the problem
12. How to handle this issue
13. There is one service or application where 1000 requests are coming at a time, how do you handle such a case
14. How will you optimize API performance
15. How will you design pagination when there are 10 million records
16. How will you optimize database writes
17. How do you secure your APIs
18. How do you prevent SQL injection on your REST APIs
19. What is deadlock
20. How do you detect deadlock in production
21. How do you handle deadlock in production
22. How do you detect OutOfMemoryError in production
23. How do you handle OutOfMemoryError
24. Have you worked on migration of any project
25. How did you migrate the database
26. What is Docker
27. How to create Docker image
28. What is Kubernetes
29. Core Kubernetes components

Company Name : Saint globain

Interview Questions:

1. Introduction
2. Which version you are using in project ?
3. Java 17 version
4. What is hook in angular ?
5. Scenario question in angular
6. What is logging?

7. Can we use jwt and another authentication for login and he gave me the scenario question.

8. What is stream api?

9. `List<integer> = {1,2,3,4,5}` multiply with each other using stream.

10. What is indexes ?

11. Difference between primary key and unique.

12. What is trigger.

Note: mostly they are asking for angular.
